                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NOTE: This is a 'working draft' sequence. It currently consists of 55 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

FUNCTION: This is one of the several different receptors for 5-bydroxytryptamine (serotonin), a biogenic hormone that functions as a neurotransmitter, a hormone, and a mitogen. The activity of this receptor is mediated by G proteins. Probably involved in arxiety and depression.

SUBCELLULAR LOCATION: Integral membrane protein.

TISSUE SPECIFICITY: Brain; in the CAl region of hippocampus, the medial abbenula, and raphe nuclei.

SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

STRONGEST TO THE OTHER SHT-5 SUBTYPE RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SEQUENCE FROM N.A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        64
                                                                                           anxiety and depression.
SUBCELLULAR LOCATION: Integral membrane protein.
TISSUE SPECIFICITY: Expressed predominantly in the central nervous system; in the hippocampus, habenula, and the doral raphe.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
STRONGEST TO THE OTHER 5HT-5 SUBTYPE RECEPTORS.
FUNCTION: This is one of the several different receptors for 5-hydroxtryptamine (serotonin), a biogenia-hormone that functions as a neurotransmitter, a hormone, and a mitogen. The activity of this receptor is mediated by G proteins. Probably involved in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 MetGluValSerAsnLeuSerGlyAlaThrProGlyLeuAlaPheProProGlyProGlu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ATGGAGGCCGCTAGCCTTTCAGTGGCCACCGCCGGCGTTGCCCTTGCCCTGGGAACCCGAG

Submitted (ARR-2002) to the EMBL/GenBank/DDBJ databases.
-! FUNCTION: This is one of the several different receptors for 5-
- FUNCTION: This is one of the biogenic hormone that functions as a neurotransmitter, a hormone, and a mitogen. The activity of this receptor is mediated by G proteins.
-! SUBCELUMAR LOCATION: Integral membrane protein.
-! SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
SIRONGEST TO THE OTHER SHT-5 SUBTYPE RECEPTORS.

"Mouse 5-hydroxytryptamine5A and 5-hydroxytryptamine5B receptors
of define a new family of serotonin receptors: cloning, functional
expression, and chromosomal localization.";
Mol. Pharmacol. 43:313-319(1993).

I. FUNCTION: This is one of the several different receptors for 5-
hydroxytryptamine (serotonin), a biogenic hormone that functions
as a neurotransmitter, a hormone, and a mitogen. The activity of
this receptor is mediated by G protein.

I. SUBCELLUIAR LOCATION: Integral membrane protein.

I. SUBCELLUIAR LOCATION: Integral membrane protein.

I. TISSUE SPECIFICITY: Expressed predominantly in the central nervous
system; in the cerebral cortex, hippocampus, habenula, olfactory
bulb and granular layer of the cerebellum.

I. SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

STRONGEST TO THE OTHER SHT-5 SUBTYPE RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             FUNCTION: This is one of the several different receptors for 5-hydroxytryptamine (serotonin), a biogenic hormone that functions as a neurotransmitter, a hormone, and a mitogen. The activity of this receptor is mediated by G proteins that inhibit adenylate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nothen M.M., Erdmann J., Shimron-Abarbanell D., Propping P.; "Identification of genetic variation in the human serotonin 1D beta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cyclase activity.
SUBCELLULAR LOCATION: Integral membrane protein.
PTM: Phosphorylated, and palmitoylated. Desensitization of the receptor may be mediated by its phosphorylation.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors. Strongest to the other 5HT-1 subtype receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDLINE=92210526; PubMed=1348246;
